Tibetan Manuscripts in Gansu Province, China by Sam van Schaik

Although the majority of the manuscripts found in the library cave in Dunhuang were Chinese, reflecting the fact that the Chinese empire controlled this area for much of the first millennium, there were also considerable numbers in other languages, primarily Tibetan and Uighur. This issue of the newsletter is devoted to the Tibetan manuscripts and Tibetan Silk Road art and culture.

Below, Dr van Schaik of the International Dunhuang Project reports on the Tibetan manuscripts remaining in collections in Gansu Province, China, following his research visit to Dunhuang last year. He also gives a short report on the Ellsworth Huntington collection at Yale University. There are further reports on the Songtsen Library and listings of web sites and books relating to Tibetan art and culture.

Tibetan Manuscripts in Gansu Province, China by Sam van Schaik

A large number of manuscripts, many in Tibetan, remained in Dunhuang after Aurel Stein and Paul Pelliot had made their selections from the original cache. The Tibetan manuscripts were still there after the Chinese authorities had removed most of the Chinese manuscripts to Beijing in 1910. Subsequently a relatively small number of Tibetan manuscripts were acquired by the Otani and Oldenburg expeditions but, in 1919, a government official sent to Dunhuang reported finding 94 scroll bundles and 11 pothi volumes. The great majority of these were Tibetan. They were then removed from the cave, but their fate afterwards is little known outside China.

The present whereabouts of the manuscripts

In a 1978 article by Huang Wenhuan was published on
the whereabouts of the Dunhuang Tibetan manuscripts in Gansu province (Wenwu (Dec. 1978), pp. 59-63). He reported that small collections of Tibetan manuscripts were held in the county museums of Jiuquan, Zhangye and Wuwei, that the Dunhuang Academy held 42 pothi folios and 43 scrolls, and that Lanzhou Library held 1,117 folios and 30 scrolls. Most significantly, he reported that Dunhuang City Museum held 8,780 Tibetan folios and 224 scrolls.

In July 2000 I had the opportunity to visit Dunhuang on a British Academy funded research trip. At the Dunhuang Academy I was shown their collection of 47 scrolls (as well as one single panel and one fragment), all of which, except one, contained the Tibetan text of the Aparimitayurnamasutra (the exception was the Heart Sutra). There were 87 large pothi leaves, all containing the Tibetan text of the Prajnaparamitasutra in 100,000 verses.

Additionally, the Academy holds at least 700 more Tibetan pothi leaves, and numerous fragments, but all are apparently not older than the Yuan period and some are certainly more recent than that. I also visited the Dunhuang City Museum. The scrolls which I examined all contained, once again, the text of the Aparimitayurnamasutra, while the pothi leaves were all of the large variety, again with the text of the Prajnaparamitasutra in 100,000 verses. According to the museum’s curators, the other folios, which they confirmed were over 8,000 in number, were all of the same format.

The Chinese collections

The group of Tibetan manuscripts in the Dunhuang City Museum makes it the third largest collection in the world, after those of Paris and London. Furthermore, the manuscripts in the Dunhuang Academy and Lanzhou Library comprise significant smaller collections. However, while the size of the Gansu collections rivals those of the Paris and London, the manuscripts are much less varied in subject matter. It seems that both Stein and Pelliot, through a combination of circumstances, took away with them the most varied of the Tibetan manuscripts, leaving behind mainly those regular sets of manuscripts stored together in scroll bundles and large pothi volumes.

Outside Gansu, other institutions in China also have small collections of Dunhuang Tibetan manuscripts. The National Library of China in Beijing holds around 200 manuscripts which may have arrived in Beijing in 1910 along with the Chinese scrolls. Peking University Library, Shanghai Library, Shanghai Museum, and Tianjin Arts Museum each have a few manuscripts. Peking University Library acquired most of its Tibetan manuscripts in the 1950s from collectors, and this is likely to be the case with the other institutions too.

I would like to thank The British Academy, who provided me with a grant to travel to China, as well as Fan Jinshi and Luo Huaquan at the Dunhuang Academy and Sun Liping at the National Library of China who helped me during my visit.

Bibliography of Catalogues of Tibetan Central Asian Manuscript Collections
The four lectures in the series concerned primarily two broad themes: relations between Tibetan and Chinese Buddhism under the Tibetan empire during the early 9th century; and aspects of the development of Tibetan Buddhist tantrism during the early post-imperial period (late 9th and 10th centuries).

The study of Sino-Tibetan religious relations has so far generally emphasized the transmission to Tibet of Chan Buddhism, and the controversy surrounding it. It has been primarily in the work of the late R.A. Stein that other aspects of the relationship have been to some extent examined, for instance, the spread of Chinese Buddhist apocryphal literature in Tibet. In the first lecture, 'Mulian au pays des neiges: les traditions chinoises de l'arhat Maudgalyayana dans la littérature Tibétaine', we have sought to add to this line of research.

The elaboration of the legend of the Arhat Maudgalyayana during the course of Buddhism's progression from India through Central Asia to China has been a topic that has long fascinated scholars of Chinese literature and of Buddhism in East Asia. Two of the most famous products of the legend's development are the Yulanpen jing (Taisho 685) and the Da muqianlian mingjian jiiumu bianwen, often referred to in English as The Transformation Text on Mulian Saving His Mother from Hell. It can now be established that these works were to some extent known in Tibet, where they exerted a degree of influence on later Tibetan Buddhist literary accounts of the life of the Buddha and his disciples.

The Tibetan version of the Yulanpen jing is so far known from just three of the manuscript versions of the Tibetan Buddhist canon, where it is entitled 'Phags pa yongs su skyobs pa'i snod ces bya ba'i mdo (Stog Palace Kanjur no. 266, Ulan Bator 314 and Tokyo 266); it is not found in the printed editions. According to the colophon it was translated from the Chinese by 'Gos Chos-grub, the renowned ninth century translator based in Dunhuang, who is also well-known in Chinese as Facheng. The translation is literal and precise, and corresponds very closely with the published Chinese version of the Yulanpen jing, as found in the Taisho Tripitaka (no. 685).

It is of considerable interest, too, that in the Stein collection of Tibetan documents from Dunhuang in London, we find a short verse text composed by 'Gos Chos-grub himself that is devoted to the story of Maudgalyayana (de la Vallée-Poussin 1962, no. 686, IOL Tib J 686). This work is based not on the Yulanpen jing, but on the Transformation Text. Besides this, the Transformation Text had a considerable legacy in later Tibetan literature and a fuller version of it was also translated into Tibetan. Among the numerous late retellings of the tale, we have considered here the version given the popular life of the Buddha (Sangs-rgyas mdzad-rnam) authored by Sna-nam btsun-pa Skal-
bzang-chos-kyi-rgya-mtsho (15th century), and the Dmyal-gling episode of the epic of Gling Ge-sar, which seems certainly to be derived ultimately from the story of Mulian's mission to rescue his mother from hell.

The second lecture, 'L'identification du temple de De ga g.yu tshal: étude iconographique', concerned the problem of the precise location of the 'temple of the treaty' (gtsigs kyi gtsug lag khang) celebrated in the Tibetan Dunhuang manuscripts Pelliot Tibétain 16 and IOL Tib J 751, first studied by F.W. Thomas. The temple had been founded to commemorate the treaty of peace concluded between Tibet, China, the Uighurs and the kingdom of Nanzhao in 821. Though the exact significance of de ga in the name of place where the temple was situated remains uncertain (it is perhaps an ancient local geonym), philological arguments were advanced to show that g.yu tshal might have stood for the Chinese place name Yulin, though it is neither an exact translation or transcription of the latter. The suggestion that g.yu tshal = Yulin is however strengthened by the study of iconographic information contained in PT 16: this is found to closely match the actual iconography of Anxi Yulin cave 25, a temple already famed among art historians for the exceptional refinement of its murals. Its construction dates certainly to the period of Tibetan administration in the region during the early 9th century. In its overall iconographic program, as well as in the style of its execution, this temple clearly seems to mediate between Tibetan and Chinese religious worlds, and thus would have been a fitting monument to an accord between these two powers.

The last two lectures both sought to illustrate the early formation of the tantric traditions of Rnying ma pa order, with reference to a particular cycle belonging to the Rnying ma bka' ma collections, namely, the Na ral dong sprungs ('Stirring up the hells'). In the first, 'En amont de la tradition Rnying ma pa: 1. le lotus aux cent pétales: un mandala tantrique', we have studied IOL Tib J 318, a Tibetan manuscript from the Stein collection describing a lotus-mandala of 108 divinities. The mandala in question certainly is derived from the Yogatantras and probably from the Sarvadurgatiparisodhanatantra in particular. Nevertheless, we have attempted to suggest that it may also be related to the mandala called padma brgya-ladan, the 'hundred-petalled lotus', that is the special mandala of the Na ral dong sprungs cycle, and that is attested in Rnying ma pa historical sources as an icon in the temples of the Zur lineage. A functional relationship with the Sarvadurgatiparisodhanatantra is further suggested by a common emphasis on the purification of evil karma and miserable rebirth.

It is in any case quite certain that elements belonging to the Na ral dong sprungs cycle are already in evidence in the Dunhuang Tibetan documents. The final lecture, 'En amont de la tradition Rnying ma pa: 2. un rite de contrition tantrique', concerned a clear example, IOL Tib J 584, a brief tantric confessional litany. We have been able to demonstrate that most of the content of the text can be matched, word for word, with passages contained in a Rnying ma tantra that has remained unstudied to date, the Dri med bshags rgyud, the tantra, in fact, from which the Na ral dong sprungs cycle is derived.

Matthew Kapstein is Associate Professor of Tibetan and Buddhist Studies, Department of South Asian Languages and Civilizations, The University of Chicago.

Ellsworth Huntington and the Central Asian Manuscripts at Yale

Ellsworth Huntington (1876-1947) was perhaps the best known American geographer of his time. In the last forty years of his life he was a lecturer and research associate at Yale University, during which time he pursued his great interest, the effect of climate changes on human culture and civilisation.

Before he arrived at Yale, Huntington also had a short career as one of the first Central Asian explorers. He accompanied an expedition led by Raphael Pumpelly in 1903-1904, which spent most of its time in Russian Turkestan (as it was then), north-west of the Taklamakan Desert. In 1905-06 he accompanied an expedition led by Robert Barrett into Chinese Turkestan, travelling over the Himalayas to Khotan and Niya. Setting out in a different direction from Barrett, Huntington travelled east from Niya to the Lop Nor desert, then north to Turfan, and travelled home via Siberia and Russia.
Huntington drew on his Central Asian experiences to illustrate his theory of the significant effect of climatic change on civilisations in his book *The Pulse of Asia* (Houghton Mifflin, Boston, 1907). He concluded that: 'with every throb of the climatic pulse which we have felt in Central Asia, the centre of civilisation has moved this way and that. Each throb has sent pain and decay to the lands whose day was done, life and vigour to those whose day was yet to be.'

Although Huntington was not an archaeologist, he brought back a few souvenirs from his Central Asian journeys, manuscripts and artifacts, which were acquired by Yale University Library after his death. This small collection includes some fragments of sculpture, probably from one of the sites on the southern Silk Road, and manuscripts on paper and wood. These include a portion of the Saddharmapundarikasutra in Sanskrit, a page from *The Book of Zambasta* in Khotanese, and wooden slips with Kharosthi, Khotanese and Tibetan inscriptions.

Huntington was not a textual scholar, but he was able to enlist the help of F.W. Thomas, a retired India Office librarian and scholar living in Oxfordshire, who catalogued the Kharosthi and Tibetan wooden slips. Most of Thomas's transcriptions were published and, more recently, scholars including R.E. Emmerick and Akira Yuyama have published studies of the other manuscripts in the Huntington collection.

**Sam van Schaik, IDP, The British Library.**

Many thanks to Dr Jonathan Silk for his help at Yale, and to Annette Demming for providing the picture of Ellsworth Huntington.

**Other Resources for Tibetan Research**

**The Songtsen Library**

The Songtsen Library is an International research library whose goal is to make accessible in one place (digitally or otherwise) the extant and diverse primary and secondary sources dedicated to Himalayan culture and history. The special emphasis of the Songtsen Library is the complete Dunhuang collected Tibetan manuscripts as well as the study and preservation of the history of Tibetan and Himalayan culture.

The library will also have significant holdings on all traditions of Buddhism furthering the study of Buddhist scripture and scholarship.
The library will use state-of-the-art computer technology bringing online an integrated catalogue and index, unifying search and query of local and international databases for all extant sources of information.

For more information, contact:

**THE GODS OF THE HIMALAYAS Essen Collection of Tibetan Art**  
Opening 6 May, 2001  
Museum der Kulturen  
Basel, Switzerland

Thanks to a generous donation in 1998, the Museum der Kulturen Basel now possesses one of the
world’s most important collections of Tibetan art. It was compiled by the religion scientist Gerd-Wolfgang Essen in Hamburg. During his thirty years of research, Essen not only collected two hundred thangkas and religious statues, but also ritual utensils, books, masks, musical instruments, temple textiles and furniture. Thus, this unique collection today provides us with an impressive picture of the religious culture of Tibetan Buddhism.

Fieldwork Opportunities

ARCHAEOLOGY IN WESTERN UZBEKISTAN (ANCIENT CHORASMIA)

The University of Sydney Central Asian Programme (USCAP) invites volunteers to join them on their current excavations in western Uzbekistan (ancient Chorasmia). The trip is organised as a tour, with two weeks spent with the field team excavating a massive fortified city dating to around the 4th century to 2nd century AD and a fire temple complex of roughly the same date. The visitors will then continue to a tour of the Silk Road cities of Khiva, Bukhara and Samarkand.

There are two group departures, each of about 12 people. 3 and 17 Sept. ex-Sydney. You may also join the tour in Tashkent (land-only price available on request). A shorter tour takes place in May/June. This replaces the excavation with a five day study tour of the early frontier fortresses of Chorasmia.

Details can be obtained from our website at:
http://members.spree.com/education/uscap/uscap/htm
You may also email the Project Director, Dr Alison Betts at: alison.betts@archaeology.usyd.edu.au

SUMMER ARCHAEOLOGY IN SOUTHERN RUSSIA AT THE CHASTIYE KURGANS

The Center for the Study of Eurasian Nomads is now taking applications for the above. Information on the archaeological site, the leaders of the expedition, dates of the session, and other pertinent information is available on the CSEN website at:
http://www.csen.org
or directly on the Chastiye Kurgans Information page at:

Joint Project with the National Library of China

A memorandum of Understanding for a five year project between the British Library and the National Library of China concerning the International Dunhuang Project was signed on 7 March by Lynne Brindley, Chief Executive of the British Library, in the presence of H.E. Ma Zhenguang, Chinese Ambassador to the UK. Zhou Heping, Deputy Director of the National Library of China, was signatory for the Chinese side.

The reception was also attended by representatives of the two main project sponsors, Professor Naylor, Chairman of the Sino-British Fellowship Trust (SBFT), and Jannette Cheong, Head of International Collaboration and Development, The Higher Education Funding Council for England (HEFCE) (pictured left). Full details of this exciting collaboration will be given in the next issue of IDP News.

Right: HE Ma Zhenguang, Chinese Ambassador to the UK, with Lynne Brindley, Chief Executive of The British Library, signing the agreement with the National Library of China.

The Mellon International Dunhuang Archive

In December 2000 the Andrew W. Mellon Foundation agreed to make an award of $1.1 million to the British Library for the Mellon International Dunhuang Archive (MIDA), a scholarly resource that the BL is taking a leading role in developing. The Archive will include two and three-dimensional images of the Dunhuang Buddhist caves linked with digital images of a selection of the artefacts and manuscripts found at Dunhuang. The Archive will complement the International Dunhuang Project web database which will continue to work towards digitizing all of the first millennium manuscripts and documents found at Dunhuang and other Silk Road sites and now in collections worldwide and making them freely available to all on the Internet.

Over the next four years, as part of the Mellon funded project, IDP will digitise over 4,000 manuscripts comprising 35,000 images using the latest digital cameras. As part of this project, advertisements were placed for six new IDP staff, including an Administrative Manager, 3 photographers and 2 Imaging Assistants. Full details of the new IDP personnel and progress on this project will be given in the next issue.

People

Susan Whitfield attended the ECAI conference held at the City University of Hong Kong in January, 2001. She also gave several talks in Hong Kong on the project.

Dr Ksenia Kepping from the Institute of Oriental Studies, St. Petersburg, arrived in London for a three month visit to catalogue the Tangut (Xixia) manuscripts from Kharakhoto, funded by the UK National Heritage Memorial Fund. An article by Dr Kepping will appear in the next issue. Two new
imaging consultants started work with the IDP team during January, working on Tibetan and Chinese fragments respectively.

**Conservation**

*Right: Stein fragments Or.8212/480-484 (Maspero Nos. 169-173) reunited as one document.*

Anna-Grethe Rischel visited the library in December to give a report on her research into the paper fibres of the fragments from Loulan both in the Hedin and Stein collections. She has been working closely with Japanese colleagues on these fragments and the results will be published later this year.

Conservation was carried out at the British Library on the particular Loulan fragments under investigation, and they were rejoined (see right). It is curious that these fragments, which clearly belong together, were found by Stein at different sites in the Loulan area, some several miles apart.

**Electronic Publication**

IDP was submitted as one of the first electronic publications of the California Digital Library/Electronic Cultural Atlas Initiative collaboration. Details will shortly be available on [www.ecai.org](http://www.ecai.org).
